ABP Food Group

OpenEdge Software Developer Position

An excellent graduate opportunity has arisen to join a growing software development team within a large beef processing company. Software development experience with OpenEdge is not required for starting in this role, as training will be provided on the job.

The team are looking for individuals with a relevant IT degree and knowledge of software development technologies and methodologies.

Candidates should be able to demonstrate high achievement at third level with proven problem solving skills. From a technical perspective, candidates should be proficient in one or more of the following: Progress OpenEdge ABL (not essential as stated), Object Oriented Design, Eclipse IDE, Mobile Development, .NET, SQL, and relational database technology.

Previous work experience is not essential but a strong analytical mind is! The candidate should be self-motivated and be able to work on projects independently as required.

Range of Responsibilities

- o Technical analysis & production of technical design documents
- o Requirements analysis and solution design in line with existing applications/frameworks
- o Develop system changes in line with functional requirements
- o Code programs in line with development standards
- o Unit test code prior to delivery for testing
- o Research new technologies and develop proof of concepts
- o Provide expertise to assist in support calls and system queries
- o End user training

Location

The position will be based in Co. Louth but travel to other sites in Ireland and Poland may be necessary from time to time, as the need arises. A full clean driving license would be a distinct advantage in this role.
